DETAILED ACTION

1. This office action is in response to Applicant's filing of Appeal Brief in response to the Final Rejection dated 7/1/2004. Claims 1-20 are pending.

Allowable Subject Matter

2. Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to system, method and computer product for on-access computer virus scanning of files. Applicant contends that the unique feature of the invention is to identify an application program related process for accessing files and selecting virus detection actions based at least in part on the identified process and assigning an identifier to the process if no identifier is assigned thereto. Chen, on the other hand, teaches selecting virus detection actions based on file types. Examiner's response to the argument in the Advisory that "Chen teaches in the cited portion of prior art that the server is performing the detection of viruses requested by the client and each virus detection routine is tailored according to different types of file...because in order for the server to determine which routine to access, the server must determine what type of application it is accessing in order to identify the detection routine tailors to that particular application", for example, an application accessing a file without a file extension, assigning an identification (file extension) would be needed in order to identify the routine of virus detection that tailor to that file type). However, Applicant argues with excerpt from Chen that "the server of

Chen does not need to determine what type of application it is accessing in order to identify the detection routine that tailors to that particular application, instead Chen merely utilizes file extensions for selecting virus detection actions based on file types" (Chen, col. 11, lines 29-51). Furthermore, Applicant claims "the use of application program process-specific identifier allows virus detection actions to be selected based on the identifier for accelerating the selection process, Thus the present claimed invention need not identify the application program process, since the identifier (when available) is used to select the virus detections actions". Therefore, in light of the argument presented in Appeal Brief, Applicant's claimed invention appears to distinguish over the cited prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
